

1       **ABSTRACT OF THE DISCLOSURE**

2           A scanner has a motor, a transmission gear set coupled with the motor, a contact  
3           image sensor and a belt connected between the transmission gear set and the contact  
4           image sensor. A sensing assembly has a casing adapted to be mounted on a side of a  
5           screen and a sensor securely received inside the casing to initiate the motor such that the  
6           contact image sensor is also driven to scan.
